CISCO Partner

CONNECT YOUR WORLD
WITH IZO™ SDWAN POWERED BY CISCO

Get complete flexibility, choice of a custom solution and zero complexity of management.

Game-changing performance

Native cloud connectivity: Transition smoothly to multiple clouds. Cloud OnRamp optimisation on SaaS applications allows flexibility and scalability for shared services and future.

Fit your business: Cisco SDWAN offers flexibility for cloud & on-premise, with quick access to SaaS applications, a secure, scalable fabric and support to multiple transports.

Simplify management: Get a differentiated experience and deployment flexibility for hybrid WANs using software-defined architecture, delivered as a managed service with fully managed IZO™ SDWAN solution from Tata Communications.

Best-in-class security: Get the advantage of built-in end-to-end segmentation, next-gen firewall, SIGS and vProxy in your environment.

Customer experience that matters: Tata Communications brings successful implementation and management experience of large underlay and SDWAN networks across 50+ enterprises; 3000+ sites; with 4000+ experts in 5 service contact centres worldwide for assessment, design, delivery and support.

Here is how three disparate industries can make the most of SDWAN's potential as a foundation

Manufacturing

Secure and control business partner access through the extranet

Introduce end-to-end segmentation to address compartmentalised LOBs and dozens of isolated segments

Protect factories and provide maximum availability through load sharing using IZO™ Internet WAN as the primary with back-up from IZO™ Internet WAN or broadband

Healthcare

Introduce end-to-end segmentation to address access to private information and prevent unauthorised intruders

Migrate to cloud-based healthcare (EMR/EHR) applications

Ensure 100% network uptime of patient and administrative services

Transition to Hybrid WAN for active/active utilisation and application-based path selection

Achieve zero-touch IT capability while migrating the clinic footprint to the cloud

HOSPITAL

Financial and Trading Services

Rollout multicast trading or cloud applications leveraging a zero-trust secure fabric

Provision more bandwidth at a lower cost resulting from a diverse pool of active-active capacity

Define application policies for optimal quality of experience and application aware routing to enabled in branch services such as digital signage, and virtual expert HD video

Rollout application aware topologies leveraging a zero-compromise secure fabric and ubiquitous encryption to address differences between ATM machine communications and branch-to-branch VoIP or video
